nAMIP on Sea

Tel

communicatio

ns. OpenAMIP

is an ASCII

message-

based

protocol. It is

a specification

for the

interchange of

information

between an

antenna

controller and

a satellite

modem.

OpenAMIP

allows the

modem to

command the

controller to

target a particular satellite and also allows the modem and antenna controller to exchange information. OpenAMIP is an IP-based protocol that facilitates the exchange of information between an antenna controller unit and a satellite. Facilitating the Exchange of Information between the Antenna and the Router without Proprietary Coding. OpenAMIP - ST Engineering iDirectThe OpenAMIP

protocol is a peer protocol: Neither side is the master. The protocol is primarily intended to convey state change information based on external events. In particular, to comply with certain regulatory constraints, the modem must disable its transmitter within 100ms when the antenna loses lock on a satellite, and must also disable the transmitter immediately when a blockage

occurs. General Edition v4\_4a - ScribdOpenamip When somebody should go to the ebook stores, search instigation by shop, shelf by shelf, it is in point of fact problematic. This is why we allow the book compilations in this website. OpenamipOpenAMIP stands for Open Antenna to Modem Interface Protocol (marine satellite communication).
