Research in cognitive psychology, linguistics, and artificial intelligence - the three disciplines that have the most direct application to an understanding of the mental processes in reading - is presented in this multilevel work, originally published in 1980, that attempts to provide a systematic and scientific basis for understanding and building a comprehensive theory of reading comprehension. The major focus is on understanding the processes involved in the comprehension of written text. Underlying most of the contributions is the assumption that skilled reading comprehension requires a coordination of text with context in a way that goes far beyond simply chaining together the meanings of a string of decoded words. The topics discussed are divided into five general areas: Global Issues; Text Structure; Language, Knowledge of the World, and Inference; Effects of Prior Language Experience; and Comprehension Strategies and Facilitators, and represent a broad base of methodology and data that should be of interest not only to those concerned with the reading process, but also to basic science researchers in psychology, linguistics, artificial intelligence, and related disciplines.

A comprehensive overview of important contemporary issues in the field of reading research from the mid 1980s to mid 1990s, this well-received volume offers readers an examination of literacy through a variety of lenses--some permitting microscopic views and others panoramic views. A veritable "who's who" of specialists in the field, chapter authors cover current methodology, as well as cumulative research-based knowledge. Because it deals with society and literacy, the first section provides the broadest possible view of literacy. The second section defines the range of activities culturally determined to be a part of the enterprise known as literacy. The third focuses on the processes that individuals engage in when they perform the act of reading. The fourth section visits the environment in which the knowledge that comprises literacy is passed on from one generation to the next. The last section, an epilogue to the whole enterprise of reading research, provides apt philosophical reflection.

Text comprehension is a critical area of psychological and educational research, and has particular relevance to educational context. The general aim of this international volume Reading Comprehension in Educational Settings is to encourage excellence in research and to bring together teachers, students, researchers and other professionals from different disciplines (e.g. psychology, linguistics, neuroscience, education, information technology, and communication), as well as all those members of the general public who have an interest in the study of reading. The specific objectives of the different chapters in this volume are to analyze existing methods of studying the various aspects of reading comprehension, disseminate results already obtained by research groups working in the field and debate current and future trends in the study of reading.

German Reading Skills for Academic Purposes allows researchers and learners with no prior understanding of German to gain an understanding of written German at CEFR C2/ACTFL Intermediate-High level that will allow them to read a variety of German texts, including research articles and monographs. This is achieved by looking closely at the elements of German grammar required for the understanding of written German along with practical advice and observations. One of the main themes running through the textbook is that it uses a toolkit approach that puts deductive reasoning and decoding skills at its heart to allow learners to engage with a wide variety of texts.

Adult literacy teachers are constantly searching for effective, engaging and distinctly 'adult' ways to develop adult emergent reading and, for at least the past two hundred years, adults have formed themselves into reading circles to read and discuss novels on a weekly or monthly basis. Why then are reading circles rarely used, or studied, in formal adult literacy provision? This book explores adult reading development, novel reading and reading circles in the context of a wider examination of reading pedagogies and practices in the English-speaking world. It discusses reading as both an individual and a communal act and investigates the relationship between literature and literacy development, practice and pedagogy (including a reassessment of the controversial approaches of reading aloud and phonics for adults). Sam Duncan reviews a case study of an adult reading circle in a large London further education college and identifies the wider implications for the teaching and learning of adult emergent reading, for the use and understanding of reading circles and for how we understand the novel reading experience more broadly.

This book highlights some of the main lines of research in cognitive psychology in the Alps-Adria region, which, being geographically located in the centre of the European continent, encompasses eleven regions from six different countries: namely, Austria, Croatia, Hungary, Italy, Serbia and Slovenia. The reason for bringing together authors from different geographical areas and with different approaches to the broad discipline defined as Cognitive Science is detailed in the first section of this book, which outlines a brief history of psychology in each country in the region and provides an overview of the spirit that characterizes the Alps-Adria working community. The Alps-Adria Rector Conference "believes that harmonious coexistence and efficient collaboration of the peoples and communities of the different regions constitute the characteristics and specificities of the present cultural landscape of the Alps-Adria region in Europe." It is in this spirit that this book has been edited, underscoring the concept of unity in diversity that has characterized the Alps-Adriatic community. Furthermore, such unity is now a necessary attribute for science, where interdisciplinarity is both highly encouraged and increasingly accepted. The second and third sections of the book are devoted to situating this interdisciplinarity in the framework of cognitive science. As such, this book will serve as a basis for fruitful exchange not only inside the community, but also beyond both geographical and theoretical borders.

Bernice Wong's Learning about Learning Disabilities was the first text to give equal attention to the intellectual, conceptual, and practical aspects of learning disabilities. The Third Edition of this popular title presents 80% new material, keeping the chapters up to date in this fast-moving field. With new contributors, and seven new chapters, coverage is both comprehensive and thorough, with three sections encompassing the research aspects of learning disabilities, the instructional aspects of learning disabilities, and the issues germane to different age ranges of the learning disabled:

children, adolescents, and adults. Chapters summarizing research on learning disabilities include coverage of ADHD, memory, language processing, social competence, self-regulation, and brain structures as they apply to learning disabilities. Chapters focusing on instructional aspects of learning

disabilities include coverage of teaching literacy, reading comprehension, writing, and mathematics. Readers will find Learning About Learning Disabilities, Third edition suitable for use as a reference source for researchers or a graduate level text. Reviews from previous editions: "An undergraduate text that strikes a careful balance between the intellectual (psychological) and practical aspects of learning disabilities." —BOOK NEWS, INC. "This text provides a balanced focus on both the conceptual and practical aspects of learning disabilities. Its research coverage is more comprehensive and of greater depth than any other LD textbook, and it is distinctive in its treatment of such important areas as consultation skills and service delivery." —CHILD ASSESSMENT NEWS "Learning About Learning Disabilities provides a broad overview of some important issues in relation to the education and development of pupils with learning disabilities... Wong has succeeded in providing detailed descriptions and comments within a book which covers a broad range of topics. Without exception the chapters are clearly written and accessible, and many provide the reader with challenging ideas and practical suggestions." —BRITISH JOURNAL OF SPECIAL EDUCATION \* Provides a balanced focus on both the conceptual and the practical aspects of learning disabilities. \* Research coverage more comprehensive and of greater depth than any other textbook about learning disabilities \* The work is distinctive in its treatment of such important areas as consultation skills and service delivery
