A Course in Game Theory presents the main ideas of game theory at a level suitable for graduate students and advanced undergraduates, emphasizing the theory's foundations and interpretations of its basic concepts. The authors provide precise definitions and full proofs of results, sacrificing generalities and limiting the scope of the material in order to do so. The text is organized in four parts: strategic games, extensive games with perfect information, extensive games with imperfect information, and coalitional games. It includes over 100 exercises.

Seventy-seven letters from an upper-class English woman to her paramour offer a window in to a courtship that, the editor argues, are marked by the intelligence of the writer and her insistence of being treated as an intellectual equal. Explanatory notes and an introduction discussing the importance of the letters for

understanding gender politics in 17th century England accompany the letters. Appendices present letters from after the marriage, genealogies, and other contextual information. Annotation copyrighted by Book News, Inc., Portland, OR.

The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. Human Dimension and Interior Space is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard

Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With Human Dimension and Interior Space, these standards are now accessible to all designers of interior environments.

In the past one hundred years, two major realities have changed both science and religion. The world of science has been enriched by quantum physics, the computation of the age of the universe, archaeological data in the Middle East, and a scientific stress on historical writing. The world of religion has been enriched by the establishment of the World Council of Churches and the Second Vatican Council. In the past fifty years, major scientists and major religious leaders have met together again and again. In the past fifty years, religious leaders from Christianity, Islam, and Judaism have held a number of thought-provoking conferences. In this volume, these gatherings are reviewed and evaluated. Two major religious problems have challenged the science-religion discussions, namely, which God should the scientists agree on, the Trinitarian God, Allah, or Yahweh? Which history of the universe sponsored by these three religions should scientists be looking for? This volume raises questions and suggests some preliminary forms of serious discussion.

Confession is a history of penance as a virtue and a sacrament in the United States from about 1634, when Catholicism arrived in Maryland, to 2015, fifty years after the major theological and disciplinary changes initiated by the Second Vatican Council. Patrick W. Carey argues that the Catholic theology and practice of penance, so much opposed by the inheritors of the Protestant Reformation, kept alive the biblical penitential language in the United States at least until the mid-1960s when Catholic penitential discipline changed. During the nineteenth and early twentieth centuries, American Catholics created institutions that emphasized, in opposition to Protestant culture, confession to a priest as the normal and almost exclusive means of obtaining forgiveness. Preaching, teaching, catechesis, and parish revival-type missions stressed sacramental confession and the practice became a widespread routine in American Catholic life. After the Second Vatican Council, the practice of sacramental confession declined suddenly. The post-Vatican II history of penance, influenced by the Council's reforms and by changing American moral and cultural values, reveals a major shift in penitential theology; moving from an emphasis on confession to emphasis on reconciliation. Catholics make up about a quarter of the American population, and thus changes in the practice of penance had an impact on the wider society. In the fifty years since the Council, penitential language has been overshadowed increasingly by the language of conflict and controversy. In today's social and political climate, Confession may help Americans understand how far their society has departed from the penitential language of the earlier American tradition, and consider the advantages and disadvantages of such a departure.

People are leaving the church J.D. Greear pastors. Big givers. Key volunteers. Some of his best leaders and friends. And that's exactly how he wants it to be. When Jesus gave his disciples the Great Commission, he revealed that the key for reaching the

world with the gospel is found in sending, not gathering. Though many churches focus time and energy on attracting people and counting numbers, the real mission of the church isn't how many people you can gather. It's about training up disciples and then sending them out. The true measure of success for a church should be its sending capacity, not its seating capacity. But there is a cost to this. To see ministry multiply, we must release the

seeds God has placed in our hands. And to do that, we must ask ourselves whether we are concerned more with building our kingdom or God's. In *Gaining By Losing*, J.D. Greear unpacks ten plumb lines that you can use to reorient your church's priorities around God's mission to reach a lost world. The good news is that you don't need to choose between gathering or sending. Effective churches can, and must, do both.
