In this stunning, Lambda Literary Award-winning debut novel, *Amber Dawn* subverts the classic hero's quest adventure to create a dark post-feminist vision. Sub Rosa's reluctant heroine is a teenaged runaway named "Little"; she stumbles upon an underground society of ghosts and magicians, missing girls and would-be johns: a place called Sub Rosa. Not long after she is initiated into this

family of magical prostitutes, Little is called upon to lead them through a maze of feral darkness: a calling burdened with grotesque enemies, strange allies, and memories from a foggy past. *Sub Rosa* is a beautiful, gutsy, fantastical allegory of our times.

INTELLIGENT CURIOSITY Springer Science & Business Media

"No nation can win a battle without faith," Steve Biko wrote, and as Daniel R. Magaziner demonstrates in *The Law and the Prophets*, the combination of ideological and theological exploration proved a potent force. The 1970s are a decade virtually lost to South African historiography. This span of years bridged the banning and exile of the country's best-known antiapartheid leaders in the early 1960s and the furious protests that erupted after the Soweto uprisings of June 16, 1976. Scholars thus know that something happened--yet they have only recently begun to explore how and why. *The Law and the Prophets* is an intellectual history of the resistance movement between 1968 and 1977; it follows the formation, early trials, and ultimate dissolution of the Black Consciousness movement. It differs from previous antiapartheid historiography, however, in that it focuses more on ideas than on people and organizations. Its singular contribution is an exploration of the theological turn that South African politics took during this time. Magaziner argues that only by understanding how ideas about race, faith, and selfhood developed and were transformed in this period might we begin to understand the dramatic changes that took place."--Publisher description.

Some revision of public schooling history is necessary to challenge the dominant mythology that public schools were established on the grounds of values-neutrality. In fact, those responsible for the foundations of public education in Australia were sufficiently pragmatic to know that its success relied on its charter being in accord with public sentiment. Part of the pragmatism was in convincing those whose main experience of education had been through some form of church-based education that state-based education was capable of meeting the same ends. Hence, the documents of the 1870s and 1880s that contained the charters of the various state and territory systems witness to a breadth of vision about the scope of education. Beyond the standard goals of literacy and numeracy, education was said to be capable of assuring personal morality for each individual and a suitable citizenry for the soon-to-be new nation. As an instance, the NSW Public Instruction Act of 1880 (cf. NSW, 1912), under the rubric of "religious teaching", stressed the need for students to be inculcated into the values of their society, including understanding the role that religious values had played in forming that society's legal codes and social ethics. The notion, therefore, that public education is part of a deep and ancient heritage around values neutrality is mistaken and in need of serious revision. The evidence suggests that public education's initial conception was of being the complete educator, not only of young people's minds but of their inner character as well.

"The name Leakey is synonymous with the study of human origins," wrote *The New York Times*. The renowned family of paleontologists—Louis Leakey, Mary Leakey, and their son Richard Leakey—has vastly expanded our understanding of human evolution. The *Origin of Humankind* is Richard Leakey's personal view of the

development of *Homo Sapiens*. At the heart of his new picture of evolution is the introduction of a heretical notion: once the first apes walked upright, the evolution of modern humans became possible and perhaps inevitable. From this one evolutionary step comes all the other evolutionary refinements and distinctions that set the human race apart from the apes. In fascinating sections on how and why modern humans developed a social organization, culture, and personal behavior, Leakey has much of interest to say about the development of art, language, and human consciousness.

Ideas are embedded in social arrangements, which in turn produce effects. With this simple premise, this radically accessible systems design book makes a compelling case for arrangements as a rich and overlooked terrain for social justice and world building. Unpacking how ideas like racism and sexism remain sturdy by embedding themselves in everything from physical and social infrastructure to everyday speech and thought habits, this book gives readers the tools to sense, intervene in and imagine new arrangements.

World-renowned Stanford University psychologist Carol Dweck, in decades of research on achievement and success, has discovered a truly groundbreaking idea—the power of our mindset. Dweck explains why it's not just our abilities and talent that bring us success—but whether we approach them with a fixed or growth mindset. She makes clear why praising intelligence and ability doesn't foster self-esteem and lead to accomplishment, but may actually jeopardize success. With the right mindset, we can motivate our kids and help them to raise their grades, as well as reach our own goals—personal and professional. Dweck reveals what all great parents, teachers, CEOs, and athletes already know: how a simple idea about the brain can create a love of learning and a resilience that is the basis of great accomplishment in every area.

In a sweeping vision for the future of work, Neumeier shows that the massive

problems of the 21st century are largely the consequence of a paradigm shift—a shuddering gear-change from the familiar Industrial Age to the unfamiliar “Robotic Age,” an era of increasing man-machine collaboration. This change is creating the “Robot Curve,” an accelerating waterfall of obsolescence and opportunity that is currently reshuffling the fortunes of workers, companies, and national economies. It demonstrates how the cost and value of a unit of work go down as it moves from creative to skilled to rote, and, finally, to robotic. While the Robot Curve is dangerous to those with brittle or limited skills, it offers unlimited potential to those with metaskills—master skills that enable other skills. Neumeier believes that the metaskills we need in a post-industrial economy are feeling (intuition and empathy), seeing (systems thinking), dreaming (applied imagination), making (design), and learning (autodidactics). These are not the skills we were taught in school. Yet they’re the skills we’ll need to harness the curve. In explaining each of the metaskills, he offers encouragement and concrete advice for mastering their intricacies. At the end of the book he lays out seven changes that education can make to foster these important talents. This is a rich, exciting book for forward-thinking educators, entrepreneurs, designers, artists, scientists, and future leaders in every field. It comes illustrated with clear diagrams and a 16-page color photo essay. Those who enjoy this book may be interested in its slimmer companion, *The 46 Rules of Genius*, also by Marty Neumeier. Things you’ll learn in *Metaskills*:

- How to stay ahead of the “robot curve”
- How to account for “latency” in your predictions
- The 9 most common traps of systems behavior
- How to distinguish among 4 types of originality
- The 3 key steps in generating innovative solutions
- 6 ways to think like Steve Jobs
- How to recognize the 3 essential qualities of beauty
- 24 aesthetic tools you can apply to any kind of work
- 10 strategies to trigger breakthrough ideas
- Why every team needs an X-shaped person
- How to overcome the 5 forces arrayed against simplicity
- 6 tests for measuring the freshness of a concept
- How to deploy the 5 principles of “unclinging”
- The 10 tests for measuring great work
- How to sell an innovative concept to an organization
- 12 principles for constructing a theory of learning
- How to choose a personal mission for the real world
- The 4 levels of professional achievement
- 7 steps for revolutionizing education

From the back cover “Help! A robot ate my job!” If you haven't heard this complaint yet, you will.

Today's widespread unemployment is not a jobs crisis. It's a talent crisis. Technology is taking every job that doesn't need a high degree of creativity, humanity, or leadership. The solution? Stay on top of the Robot Curve—a constant waterfall of obsolescence and opportunity fed by competition and innovation. Neumeier presents five metaskills—feeling, seeing, dreaming, making, and learning—that will accelerate your success in the Robotic Age.

David Knighton's best-selling book looks at the wide range of forms developed by natural rivers and the processes responsible for that development. The book combines empirical and theoretical approaches, and provides a critical assessment of the many schools of thought which have emerged for dealing with adjustment in the fluvial system. It is fully illustrated throughout by a superb range of figures, photographs and tables. Starting with the network scale, the book examines the interaction of hillslopes, drainage networks and channels, and goes on to considerations of catchment hydrology and catchment denudation. Fluvial processes are analysed in detail, from the mechanics of flow to sediment transport and deposition. Detailing the major components of river channels, the book examines the nature of river adjustment, particularly with respect to equilibrium concepts, and concludes with a look at channel changes through time, affected by flood discharges, climatic change and human activities.
